AutoCAD is used for 2D and 3D drafting, technical illustration, conceptual design, and technical writing. Within each of these applications, AutoCAD is used for 2D drafting of floor plans, elevation drawings, and architectural design drawings, and 3D drafting and modeling of 3D objects (not necessarily with "solid" or "sketch" features). AutoCAD can also be used for complex mechanical drawings, such as mechanical systems and car designs, and it can be used to create engineering designs, such as piping, electrical wiring, and piping layouts. History AutoCAD was developed by James Gosling and Mike Loukides of Digital Equipment Corporation (DEC), working with the first DEC VAX CAD (Visualization And Computer-Aided Design) product called CADLab from 1977–1981. In 1981, Bill Foster, Chuck Peddle, and Ron Kowalski of Hewlett-Packard (HP) also joined the project. One of the early tasks of Gosling and Loukides was to port CADLab to the new VAX 11/780 computer. Gosling and Loukides would take a total of eight days to accomplish this task. The first release of AutoCAD was originally programmed in BASIC on a PDP-11, and then ported to a VAX 11/780. An incomplete copy was placed on a few VAX machines in the Computer Products Group, in the Engineering Research Laboratory (ERG). The computer on which AutoCAD was originally written could not draw in true 3D, but the developers recognized the potential in this computer and subsequently added 3D capabilities. In August 1981, Gosling and Loukides left Digital to join HP and went on to work on the CADLab port to the VAX 11/780 and the development of AutoCAD for HP's VisiCalc product. With the first release of AutoCAD 1.0, Gosling and Loukides added 2D architectural drawing capabilities, a parametric display, and the ability to place text and other objects on the screen. For a short time, AutoCAD was licensed to Computer Devices Associates and distributed to the public free of charge, but in 1985, after product costs, labor and other expenses had increased, the product was sold to Autodesk. We demonstrate the feasibility of three-dimensional (3D) holographic imaging of a volume object with a scattering in-medium volume hologram. The nonscattering in-medium volume hologram is used as a 3D reference in a modified 3D speckle-pattern interferometry. The recorded speckle pattern is retrieved by an optical diffuser and a 2D array detector. With a proper choice of the holog 5b5f913d15

I know I can do this easily with #id or #class, but the only way I can think of to change the styling is through the div's class. Is there a way to change the class without changing the id of the page? A: Dynamically changing a page's div class style That's not a good idea, because it requires JavaScript, and that's an unnecessary maintenance. Just use the URL to switch the stylesheet:
