Autodesk announced AutoCAD R14 on January 15, 2018 and R14.1 on April 3, 2018. In January 2019, Autodesk announced that as of July 1, 2019, Autodesk Design Reviewer would no longer be available, but as of July 1, 2020, Autodesk Design Reviewer will no longer be available. AutoCAD LT (or AutoCAD App, but it's pronounced 'Aw-toe-See-AHD' not 'Aw-toe-See-Dee' or 'Aue-toe-See-AHD') is the free, open source version of AutoCAD. In May 2018, Autodesk released AutoCAD LT R14.1. In July 2019, Autodesk announced that as of July 1, 2019, Autodesk Design Reviewer would no longer be available. History AutoCAD was originally a standalone piece of software intended for design and drafting work on desktop computers. It was developed in the early 1980s by a team at the prominent Chicago-based H. B. Fuller Co. (then known as the H. B. Fuller Co. Computer Services Division). In 1990, the H. B. Fuller Co. team that created AutoCAD opened the source code to it and began to make the program available under a free software license. AutoCAD source code is available at GitHub. An AutoCAD user community, the Autodesk User Group, has been operating since 1994. The Autodesk User Group uses the official support structure at Autodesk to develop a dialogue between Autodesk and its users to discuss any issues that have come up, as well as suggestions for future development. Features The key difference between AutoCAD and previous CAD software was the ability to store a geometric model in a file. The first model file format was introduced in AutoCAD 1.0. Early file formats could only handle simple geometric models, but the new format could handle many different types of objects. For example, a company could use AutoCAD to draw the outside of a building or an office and store the resulting geometry in a file that could be opened by any application or program. Although most CAD programs had their own built-in modeling tools, this first version of AutoCAD was the first CAD program that allowed modeling to be done without the need for specialized software. The geometry stored in the file

AutoCAD also includes an API for third-party software using AutoCAD as the CAD application. This API is similar to AutoLISP, except that it is a C++ API. AutoCAD has extensive XML-based markup. Originally used to describe the layers and blocks within a drawing, it has since been extended to include many other aspects of the drawing. This allows for example to create a file that can be converted into any AutoCAD file without needing to know the underlying file structure. The architecture for the Internet and Desktop features of AutoCAD changed drastically from AutoCAD 2006 onwards. The GUI for AutoCAD 2007 and later is only available through Autodesk Exchange Apps. The object model of AutoCAD in the desktop also changed; from AutoCAD 2007 onwards, AutoCAD is a client-server application. Modes of use AutoCAD is a client-server application, and only requires an

Internet connection to connect to a remote server. The client computer (i.e., the computer running AutoCAD) has a licence to AutoCAD, and must be registered with the publisher. The server is also licensed, and is typically a Unix operating system, with the AutoCAD version running on a different server to the one hosting the client. For cloud-based computing, a remote computer, or cloud server, is used. AutoCAD 2016 and newer support local applications and browsers with native JavaScript support. This means that the browser is connected directly to the CAD system, instead of using an AutoCAD-hosted web page. Licensing AutoCAD has two distinct licensing models: perpetual and subscription. A perpetual license allows users to install and use the software for a period of time on one or more computers. The license is valid for all users and is non-transferrable. A subscription allows users to install and use the software on a single computer only. Once a license has been purchased, it may be used on the computer for which it was purchased and for 10 years from the date of purchase. AutoCAD cannot be installed on more than one computer. When the original computer is no longer in use, a new or renewed subscription must be purchased. To authorize the use of AutoCAD on a computer, the user must obtain a license, which will be validated using an online web portal. A license can be used to run one or more simultaneous instances of AutoCAD a1d647c40b
