### What's New In?

Create a Clone of a whole file and edit, modify or add more. Win32: License: Freeware Reference: CloneEdit For more information go to: Jal-cloneEdit is an utility to clone a wide variety of file or folders. It can clone at the same time a file and all its sub-folders and/or files. The program is a handy helper when you are working with or copying data from a number of files to a new location. Like a smart content and text manager, Jal-CloneEdit enables you to paste, translate or edit your files and folders in a single file or folder without having to open each one again. Jal-CloneEdit is a free application for all customers and it is available for download below. Nautilus-Scripts is a plugin to create scripts to be run using the File>Scripts menu in Nautilus. Currently it provides two scripting interfaces: a simple shell script and an XML with Python and Bash scripting. The purpose of the project is to bring Linux scripting to the Nautilus shell. Windows Bart's Kernel Screenshot Grabber is a utility designed to capture and save a snapshot of the desktop screen whenever its mouse or keyboard keys are being pressed, usually at startup. It is written in C and uses jwm and the library to display an area of desktop. DesktopCompanion is a desktop notification tool to notify applications, running tasks, and users of important events from a server. It can take advantage of desktop notification services to transfer event-related information (e.g. email, IM, Jabber, web notifications) and thereby provide an application accessible notifications service. desktop-simple-notifier, or dsn, is a more user-friendly version of the kde4 notification system using a simple installer. Damn Small System Monitor (DSSM) is a system monitor for the GUI. It displays statistics about the activity of your system. It can also be used to easily shut down or reboot the system. DSSM provides detailed CPU, Memory and Network usage statistics. DSSM helps you to compare the statistics with other systems. Download Manager - download and queue manager for SVN, Mercurial, Bazaar and Git. Features include graphical visualizer, per-repository prefs, link/edit/queue management

---
