SkinCrafter is a visual skin creator tool. Choose from hundreds of free-to-use skins to decorate the interface of your project. The set of components includes main skin components like frames, dialogs, buttons, labels, tabs, scrollbars, table header rows, dialog header columns, data grid headers, check box headers and other objects. All these components may be styled in various ways using a designer created in SkinBuilder. You can create new skins easily using SkinBuilder's wizard and make skin modifications using SkinBuilder's GUI. SkinCrafter includes the set of utilities to create your skins. Many skins have a built-in skin icon, so you can use them without any

---

images. You may customize skins to improve functionality and appearance. SkinCrafter has support of ActiveX and .Net components for creating skin sets for any environment. Description: SkinCrafter provides a set of components that will allow you to create unique UI elements for your applications. You create software and we care about its user interface. Should you think of several color themes for your product - visit our gallery with hundreds of ready-to-use styles. Moreover, SkinCrafter supports msstyles skins, which are available in thousands online. Should you consider the development environment, there will not be a problem - SkinCrafter engine is offered as ActiveX and .Net component, which ensures its compatibility with the most of common programming languages. SkinCrafter is

---

accompanied with free skin maker application - SkinBuilder might be used by anyone to create new unique styles. Check how SkinCrafter can improve a visual interface of any software. There is a variety of ready-to-use skins available in skin gallery. All licensed customers may use and modify all of them with royalty-free. Support of msstyles increases the number of styles you can use dramatically, as there are a lot of free msstyles in the net. Description: SkinCrafter is a visual skin creator tool. Requirements: I need a "Create New Document" and "Send Mail" button as shown below. I need a simple looking text field that is two lines high. I need a button that displays the number of characters in the

---

text field. I need two more buttons that pop up when clicked. The contents of the text field should be visible as shown in the example screenshot. The design should be similar to the above screenshot. The buttons should look like the second screenshot, only more complicated. Document should look very simple like this (more like the screenshot). User can only upload either a new email or a new document. A drop down selection of email accounts for choosing a new email. The project will be developed in C# SkinCrafter Designer is also available to create the GUI. For I need to add the following extra info: I need 2 new buttons to close the application and for file selection purpose. (Close the application and click on the button will return to the blank screen, the second button should close the

---

application and user has to select the file from the open folder for the application to continue. Deliverables: -New Document -New Email -Close Application -Select File -Details -Template -The following files are the requirement for the application: -skin.xml -Application class -Sample/sample.cs -Sample/sample.exe -Document.cs -File selection.cs The following are the assumptions that are made for the application: -Since there are 4 buttons on the screen, each button is three lines high. -The "New Document" and "New Email" buttons should
