The AutoCAD R2018 release is the product of five years of development. Among the new features and performance enhancements of this release is the Direct Connect feature, which is intended to help users in locating lost or misplaced pages of drawings, especially from large drawings with a complex paper workflow. In addition, users can choose the order of page numbering when printing or exporting a drawing for presentation. In addition, users can now place and reference edges, faces, and shapes in 3D as well as dimensionally constrained 2D. In the December 2018 release, AutoCAD received a new thin client for mobile devices. The new mobile client brings many of the new features to mobile devices in an optimized format. The R2018 Mobile client also includes a new cloud storage feature. This article discusses the top features of the new release and the 10 changes and enhancements you must know. Top Features ACR DNG. History AutoCAD was originally conceived by an Engineering Director of a publishing company named Morgan Engineering. Due to the development of a paper-based assembly line for printing, this Director needed an automated system to measure the progress of the printed books. He began experimenting with paper design, and developed a sophisticated version of his housekeeping software that automatically arranged for the width and height of the paper during the printing process. This required a "smart" calculator which could read and interpret the calculation instructions. However, he noticed that the paper for the binding was being "misused" and sold at a fraction of its value. He realized that he needed to design a system that could bind multiple pages at once and on demand. It was during this process that the concept for a program to bind books was born. AutoCAD was developed by a small team at Morgan Engineering based on this idea. After this initial idea was conceived, they were told to do anything they wanted and that was the end of their work. With the original concept, they felt that they needed to start at the beginning. They chose to reinvent the wheel and developed their own class library, AutoLISP. Although this method was not much more efficient, it required less programming time, and since there were few people on the team, this method was the only way to survive. AutoLISP was so successful that they decided to release it as a product. At first, AutoCAD did not do anything other than bind books. However, Morgan Engineering, who were the first publisher to release AutoLISP, released two different editions of AutoCAD. The more expensive Edition 1 included a small drawing program. This was eventually replaced by the 2D Drafting tool. In 1985, AutoLISP was re-released as a separate program. This version was much faster than the previous version, and was much more useful as an engineering tool. In the late 1980s, two developers created an AutoLISP compiler, Compiler 1. AutoLISP started to evolve into a fully featured engineering and graphics program. By 1990, it was an extremely popular engineering product. In 1991, AutoLISP was released as a stand-alone package with the release of AutoCAD. At this point, there was no integrated user interface, so users had to learn two languages. By the end of that year, the product was outselling AutoCAD by a wide margin. In 1992, a1d647c40b
