* Working * No bandwidth cap * 1, 2, or 4 Computer Access * Integrated Photo Sharing * Webcam Support * Group Chat * Optional Listening * Optional Web-Browser Support * Optional Animated Wallpapers Dtella@Home Features: * Voice and Video support * Integrated Photo Sharing * Webcam Support * Group Chat * Picture in Picture * Optional Web-Browser Support * Optional Animated Wallpapers * Programmability: @Home Room,.NET API * SSL Certificates * BitTorrent * Metadata * Web-API for $HOME (setuptools support) Dtella@Home: We are distributed community Dtella@Home uses BitTorrent for P2P file sharing. It's not something we ask you to do, it's just how things work. We are also relying on everyone for help to verify a file's integrity (using TLS and

verifying SHA256) so that no one's downloading an infected file. Currently we only support downloading the.exe (non-python) version of the Dtella@Home client from the Dtella Github page. The Dtella@Home client will also support downloading the pre-compiled version on the dtella.com page. On the github page you will find a link to the pre-compiled.exe on dtella.com You must have BitTorrent installed to use Dtella@Home.

What's New In Dtella@Home?

Dtella@Home is a distributed P2P system which emulates a Direct Connect hub, allowing users to collaborate and share documents between computers. Primarily for college students to use while at home and off-campus. Dtella@Home is based off of Dtella, which was originally written by Dtella Labs. This version of Dtella has been modified to allow any IP Address to access the

network. Give Dtella@Home a try to fully assess its capabilities! Dtella@Home is currently a development prototype. Some features are not yet completed or well designed. Dtella@Home will be undergoing constant changes and updates. 2) Applications Dtella@Home runs on a DL-threading, can support any number of applications and customers. 3) User Interface Dtella@Home provides a user interface (UI) to easily configure and utilize Dtella@Home's services. 4) Authentication Dtella@Home supports user and customer authentication, using the Dtella@Home server for user authentication. 5) Network Authentication Dtella@Home supports network authentication using either the EFS, NetBIOS or Active Directory server. 6) Dtella@Home Directory The Dtella@Home directory is a database containing all network users and files. This directory is used to create user accounts, assign accounts to users, and to store any documents or information from the

network. 7) Application Configuration Dtella@Home can be configured to run any number of applications. Dtella@Home supports.NET, Java, C++, Perl, PHP and Python. 8) Configuration Tools Dtella@Home provides a number of configuration tools to help administrators and end users set up Dtella@Home for their needs. Configuration: Dtella@Home allows for three configuration schemes to be used. A. Simple User and Customer Configuration Dtella@Home allows for easy management and configuration of its services. Through the use of XML configuration files, Dtella@Home can be reconfigured easily. B. User and Customer Management Dtella@Home allows for user and customer management through use of two XML configuration files. C. Cluster Deployment Dtella@Home can be deployed in a cluster model. This can be used to increase Dtella@Home's capabilities. Dtella@Home

supports five different ways to deploy the cluster. D. Dtella Server Dtella@Home currently supports two server models. DD1. Direct Connect Server The Direct Connect Server is the primary model and consists of a Dtella server, Dtella@Home's application server, and a Dtella@Home directory. The application server is the primary control point
