"DP BurnISO is an excellent tool. It does exactly what I need it to do. It's a one-stop shop to burn ISO, CUE, BIN and other images. The UI is very simple and intuitive. I like that you can choose the file(s) you want to burn and what media type you want to use. You can also choose to erase existing data on the CD, or force buffers to remain unchanged. The burn speed can also be adjusted. My only minor gripe is that the UI sometimes becomes unresponsive for a few seconds." "I'm new to DVD burning and it's very useful when you need to burn from an ISO or CUE to a DVD. The interface is really well laid out and it has options for burn speed. The only problem with this is the fact that you cannot add or remove files from an already loaded media. Very nice tool." "DP BurnISO is quite simple and easy to use. It has a great interface and isn't very cluttered. You can choose the target media, burn speed and overwrite data. One big downside though is that you can only burn to CD. That being said, if you don't need to burn any data to a CD, you won't be disappointed."Q: grep with back reference doesn't work I'm trying to use the back reference of grep and I don't know if I forgot something or it is something wrong with my configuration. The bone response to an endosseous implant as a result of bone augmentation has been documented in the literature. Although buccal bone plate resorption is a phenomenon that has been described previously, it is generally not significant enough to require elevation of the soft tissue envelope, as in the case of the palatal bone plate resorption that occurs as a result of tooth extraction. This clinical report describes the esthetic and functional outcomes of a maxillary augmentation using an implant to overcome the deleterious effects of previous orthodontic tooth movement on the maxillary bone, followed by immediate placement of a 10 mm diameter implant. The case presented is a 36-year-old female with a history of orthodontic treatment who had several years of resorption and dehiscence of the labial bone plate.
