For example, I have a long function call with multiple parameters, I highlight it, do CTRL + K+ D, I want to change type of parameter from reference to value, but when I do, VS formats it to like this: Foo(null) The type is automatically changed to null, not Foo(string). I did the same with int to string, and int to int, and it always changed to null value type. I am using .NET 4.0 and VS 2010 Ultimate. Thanks for help. A: You can try Quick Formatting on that highlighted line. It will use the Type Information from the Class Designer and not from the Symbol Table. Q: Azure Logic Apps and Blob Storage get content I have a logic app that uploads files to a blob storage container. I'd like to get the content of those files. I think I need to get the content of the files using the blob-type input, but I'm not sure. Is it possible to get the content of the files? Thanks. A: The Content-Type of an image is JPEG, the Content-Type of a video is MPEG-2 TS, etc. You can set up this as the input type in the Logic App or read the content of the file through the property of the input type. Q: how to use sql in restful web service I am trying to use sql in restful web service. How can I insert data to sqlite database in restful webservice.

TZ Connection Booster Wizard connects to a network adapter to adjust settings in order to improve overall performance and maximize Internet transfer speed. It can configure dial up networks, cable modems, DSL enabled connections or Ethernet architectures, providing an overall better performance and lowering the chances of speed fluctuations. The aspects that make it stand out Despite there's no shortage of such utilities on the software market, TZ Connection Booster Wizard provides a more user-oriented approach than its competitions through an intuitive setup process that guides the user through the steps needed to boost Internet speeds. Wizard-based approach The program conducts a guided tweaking process through a single wizard consisting of eight main steps, the first of which requires that you choose your connection type, followed by MTU (Maximum Transmission Unit) and RWIN (Receive Window) settings. Also included in the wizard is the possibility to optimize the behavior of Internet Explorer, to define the keep alive interval, as well as to configure protection against SYN flood attacks and ICMP (Internet Control Message protocol) redirect packets. The target audience Judging by the complexity of the configurations that TZ Connection Booster Wizard delivers, the program targets users with extensive tech experience. On the other hand, provided that beginners attempt to operate it and encounter issues, there's always the possibility to undo the adjustments by resetting the network through a dedicated command. The obvious truth Although TZ Connection Booster Wizard provides a complex toolset that can indeed contribute to better speeds, it cannot work miracles. The rate of success depends on the type of connection you're running and on your skills to juggle with the parameters of the network. How to Connect to Yahoo! The Master of Fidelity for the Qvis QL series- Internet Analyzer from Qvis is easy to use and provides all the information you need. You can view and analyze local and remote TCP/IP traffic, including the overall traffic of all connected networks, the overall behavior of the current connection and the network performance of an individual or group of hosts. The Analyzer has three unique screen views to help you find what you need in a heartbeat. Network View The Network View shows your Internet connection (LAN and WAN) traffic, including the IP traffic details. The traffic is listed in both real-time and historic order. The traffic flows are displayed, with a snapshot of the last 24 hours, showing the volume, type of traffic and origin. Connection View The Connection View shows details of the TCP/IP traffic flowing in and out of the device. The overall traffic is also displayed, with a snapshot of the last 24 hours, showing the volume, type of traffic and origin. Host View The Host View shows the details of the TCP/IP traffic flowing into and out of the device. You can also track the host activity over time, displaying each session of the past 24 hours. Other features:

- The Analyzer can display and analyze both UDP and TCP traffic.
- The Analyzer provides detailed analysis of TCP/IP traffic using the Session, Outgoing, Incoming and Peers tables.
- The Analyzer displays the total network traffic volume, the nature of the traffic, and the origin and destination of the traffic.
- It provides a snapshot of the last 24 hours traffic.
- It provides a 3-D timeline to show the evolution of the traffic over time.
- The Analyzer is extremely fast, only using one CPU for all activities and providing a consistent response time to all users.
- The Analyzer automatically copies and saves a copy of the traffic data to the USB memory stick.
- You can copy the traffic data to the Windows clipboard.
