Shape Expressions AutoCAD's support for Microsoft Office makes it the first true CAD system to support shape expressions natively. This is a way of describing geometry in a way that makes it easy to interact with and edit. Examples include the ability to define a line as 'X + Y = 4' which would then define a line that runs from X to Y and is 4 units long. Shape expressions can also be saved to an external shapefile allowing them to be used in an AutoCAD-based project management tool. Although no longer commercially produced, the building blocks have remained a popular children's toy. The Elkhart County Department of Public Health is one of the biggest sellers of Lincoln Logs in the US. Lincoln Logs are a registered trademark of The Lincoln Log Group. History Elkhart Craftsmen has been a family-owned business since the mid-1920s. The company started out in 1925 when Gerald F. Hofer and his wife Lillian started producing building blocks for their two children. These blocks were based on standard pre-fabricated parts, but were made with a heart in the center of each piece. The blocks were sold under the name Masonite Building Blocks. By 1957, the business was sold and re-branded as Craftsmen's Building Blocks. In 1990, the company was acquired by the Florida based Ben Franklin companies. Craftsmen's has two lines of building blocks - Standard and Signature. The Standard blocks are a basic brick design and the Signature blocks are a more intricate design. The building blocks are shipped in sets of red, yellow, orange, and green pieces in seven sizes: 3 x 3 x 9 inches (roughly 3,000 pieces), 3 x 3 x 16 inches (roughly 5,000 pieces), 3 x 3 x 24 inches (roughly 7,000 pieces), 4 x 4 x 24 inches (roughly 6,000 ca3bfb1094
