Wake On LAN Ex Crack + (Latest)

Unlock your computer remotely with ease! A lightweight application designed to help you power up any computer from your network remotely, by sending it a special message. Needless to say that it only works with computers that are configured to turn on when such a message is received. With the help of this application, you can easily generate the 'magic packet' needed for starting up other workstations and send it over the network. The auto-discovery feature allows the program to automatically detect the existing network interfaces, enabling you to choose the one you want to send the data packet to. The default 'magic packet' that Wake On LAN Ex Full Crack creates includes a 'wake up' message, but you can also log-off, restart or shutdown the target computer remotely, or even send it network messages (using the 'Net Send' or the 'MailSlot' command) or custom instructions, such as launching an application. The application can also ping the detected workstations, enabling you to configure the ping time interval, the con-current threads number and the time-out. Wake On LAN

Ex displays the name, IP address, MAC ID, the port, status, general notes, broadcast address and other information about the found network adapters, which you can edit with just a few clicks. This way, the auto-ping feature can be activated and you can have the target computer display notifications on status change or shutdown when an error is triggered. Designed with ease of use in mind, the interface is clean and intuitive for any type of user. Its appearance is fully customizable, as you can change the theme and the toolbar style. In addition to this, the configuration settings can optionally be stored in the application directory, which makes the program portable and compatible with any removable device. Wake On LAN Ex comes in handy to anyone who needs to wake up, shutdown, log-off or restart multiple computers from remote locations. The customizable actions make it a great tool for any network administrator. Wake On LAN Ex Features: * Allows to create a 'magic packet' and send it to any computer on your LAN, thus waking up, restarting or shutting down the specified computer. * Can send network messages, such as login and logout, and synchronize the target computer's clock to another network computer. * Pings the specified workstation, to check if it is on or not. * Automatically detects existing network adapters, if they need to be configured. * Displays all the information

Wake On LAN Ex Crack + [Updated-2022]

What's New In Wake On LAN Ex?

Wake on LAN Ex helps you to quickly and easily turn on any computer in the network. It works like a small-size hardware that can be set up in any network, even when it is not connected to the Internet. You just need to configure the remote computer to the application settings, and then you'll be able to send a "magic packet" to it. Once turned on, the user will be able to control the computer's functionality from any other point in the network. Wake on LAN Ex Includes the following Features: * Wake up the computer, shutdown, restart and log off the machine remotely * Allow editing the name, IP address and MAC ID of a detected network adapter * Ability to send anything else but a "magic packet" to the remote computer: for example, mail messages, custom instructions or processes for applications * Ability to ping the remote computer * Support for Windows XP, Windows Vista, Windows 7 and Windows 8 * Ability to connect to a wireless network * Statistics tab, which displays network data: speed, status, and other properties of the detected network interfaces * Work with each network card, independently * Ability to synchronize settings to the main Settings.ini file * Various options for changing the user interface appearance: skins, colors, font and bar * Ability to save settings to disk and back them up * Ability to set the "magic packet" * Ability to detect the number of network interfaces * Ability to enable or disable the "auto-ping" feature * Ability to optionally include the "magic packet" in the application log * Ability to synchronize the application's settings between connected devices * Ability to automatically detect and automatically detect the users logged in and logged off from the detected network adapters * Ability to log off, shutdown, restart and logon the remote computer on the same network * Ability to quickly launch a process on a remote computer * Ability to turn off the monitor of the detected network adapters * Ability to receive and send email messages from a remote computer * Ability to use the "MailSlot" command to automatically send messages to the desktop * Ability to configure the "auto-ping" settings: send ping requests every n seconds, etc. * Ability to optionally show the network adapters' information on the status window * Ability to change the ping delay interval * Ability to optionally show all the network adapters' information on the status window * Ability to sort the network adapters by the name, IP

System Requirements:

Windows 7 (SP1) or later, Intel® processor based system 2.0 GHz or faster processor 1 GB RAM (2 GB RAM recommended) 20 GB free disk space DirectX®9.0c compatible video card (with 128 MB or more video memory) If you have an Intel® processor based system with a monitor resolution higher than 1280x1024, you will be able to play the game at 16:9 aspect ratio. Please also note that the game requires you to have a good internet connection.
