I have a recipe for an onion-crust pizza that I am reworking and want to put some squash in it. Now, I'm just as much of a novice at this as the average pizza-making idiot, but I have a pretty good idea of what goes into a pizza crust and I know how to make it. My problem is with the onion. I know that it's basically just a ball of florets, but I'm not sure how big that ball is. I suspect it's not a sphere (kind of like the pizza crust) and the thickness is probably a function of the squash's moisture content, but I don't know how to compute the surface area. Thanks. A: Assuming you are also a novice at cooking, have a look at this. It is a very good exposition on several issues, including how to slice an onion for baking purposes. It does give you some data on the volume of an onion of a specified thickness, so

In August 2017, I showed ElevatorVR at the Webvr Expo as well as a working version of my industrial simulation tool for arcades. The Machinarium 2 demo explains how to control and use the VR Tilt arcades as well as how it was implemented. About the Machinarium 2 demo: The Machinarium 2 demo is a VR-sample of the Machinarium-2. It explains how to control and use the VR Arcades as well as how it was implemented. Using a controller and a touchpad, you can steer a robot while it's only possible to be transformed to a fly. With the other controller button, the enemies can be stopped by the net. Also the game explains that the shield is a rocket to jump to an area with no enemies. ElevatorVR is the first multilanguage tutorial application for VR Arcades. The game explains the controller and button layout, but also gives you an altitude experience. ElevatorVR is exclusively for arcade operators. The Gamemaster can switch between the languages via a panel. Currently ElevatorVR is available in German, English and French. Additional languages will be added soon. Experience ElevatorVR in the high-resolution postapocalyptic CyperPunk scenario. Space Mechanic Simulator is a free and commercial space simulation game developed by British game developer, Colossal Order. It is a real-time space simulation game set in the early 2020s (like the 2010s) featuring flying ships with docking capability and space stations. Most of Space Mechanic Simulator runs on a Linux operating system and is open source. The game is being developed using the Colossal Order's own game engine tool, KoiF. In the game, players play the role of a ship pilot and spaceship manager. They can fly commercial spacecraft in and manage global asteroid belt settlements with a flying base. Players can invite other players to join in and collaborate with them. There are different parts to Space Mechanic Simulator. There is a game engine and game simulation that are used to develop, test, and create all space games. The game engine came in two versions, MIT license and GNU GPL, and both developed by Colossal Order. There is a pre-made space game with a decent story called "Methus" that players can play. The game engine has a ground level town and player can build their own space modules, run their own starport, and manage a whole asteroid belt settlement with space stations. There is also a season pass available that include newer modules and upgrades to the game. Space Mechanic Simulator runs on both Windows and Linux. Gameplay Space Mechanic Simulator is a real-time space simulation game set in the early 2020s (like the 2010s). Space Mechanic Simulator is a free and commercial space simulation game set in the early 2020s (like the 2010s) featuring flying ships with docking capability and space stations. The game features a simple UI but it performs well on both Windows and Linux. Players can manage their own space station with adding modules, spacecraft and rocket. Players can usually finish the entire game in a few hours. Space Mechanic Simulator is similar to Kerbal Space Program, except it includes first person perspective view with a more realistic navigation system. Players must hire workers to their team. Managers can call for overtime and any task needed to be completed. Both teams and individual players can fly their own spacecraft to the nearest point of space exploration as an initial rocket or to buy another ship. Players can buy ships using players money, but maybe cost a lot of money. Players can repair their ships and try to finish missions within time. Management Players can hire workers to their team.
