My latest game is Super Mario Galaxy 2 and I would very much like to play it on my computer (I have already read the posts that tell me this isn't possible). Is this possible? If so, how? A: Copying files over

---

the network is, typically, handled by a protocol called FTP. To do it "over a USB cable", you need to take the information you want to copy on your USB storage device, and then put that information on your computer using some protocol. USB itself doesn't provide any protocol you could use for that. The easiest thing would be to use another USB port on the computer, with another USB stick plugged in. If that doesn't work for you, you'll have to use some kind of software to do it. FTP is probably the simplest way. However, by using FTP, you'll have to create some kind of server software on the computer you want to use, and the client software to access the server. You may find that there are two separate pieces

I am currently working on a project that will require my architecture to be hosted from the O.S. I know it will need to be hosted in a XP environment, but that is really the only thing I can change. They would like the following:

- Ability to navigate the web using their laptop
- remote Ability to open a browser and navigate to any web page using their laptop
- Ability to print (with the printer connected to the guest system)
- Ability to access files on the hard drive

If they can get this done with their laptop I think they would be VERY happy. The only question is is this possible, and will it work? A: You don't mention if you have or need Windows XP SP3 or Windows Vista SP2. I don't know if any of those OS can do what you want to do, but there are ways to do it. For XP: Either use Remote Desktop Connection to access the remote computer, and then use the Printer Connect option to print; or use FreeNX to access the remote computer, and then use the File Transfer option to access the files. For

---

Vista: Use Remote Desktop Connection to access the remote computer, and then use the Remote Assistance option to access the remote computer. Using a LAN bridge or other router is another option. A: With a USB port you can do this over Ethernet.

2003–04 NBL season

The 2003–04 NBL season was the 19th season of the National Basketball League (NBL). The regular season began on Friday 10 October 2003 and ended on Thursday 28 April 2004. The finals began on Thursday 11 May 2004, and concluded on Tuesday 4 June 2004. Regular season Games were played on Friday and Saturday nights, for a total of 44 games per team.
