Data files The data files used for most of AutoCAD's applications are available for free download at AutoCAD's download page. In addition to the core drawing files, the following data files are typically required: The AutoCAD drawing files which are the basis for all other files. The drawing database files, which store the main information about the drawing. A shared data file, which stores data for many drawings. A SQLite database file for storing objects data. Data files consist of.DWG and.DWF files. AutoCAD drawing files are located in the AutoCAD User folder in the Autodesk Subscription's My Autodesk folder and are normally stored in subfolders with their naming convention of "ACADxxxx.dwg", where xxx is the version number. The database files are stored in the DBxxxx.dwg folder. Shape definitions are located in the ShapeDefs folder and are stored in.SDD files. Data files also include shared data files. These files can be used by multiple drawings or multiple companies. The.SWK file is included with the drawings and can be edited to add or remove drawing elements. The data files, shared data files and.SDD files are stored in a Data folder under My Subscription folder. History AutoCAD was developed by John Warnock and developed initially by BBN Technologies and became available commercially in 1989. The name "AutoCAD" is derived from the word "automate", in reference to the CAD system's automation capabilities. Warnock set out to create an application that would allow users to draw, edit and annotate complex drawings in the same way that they

can edit a word processing document. The AutoCAD application allows the user to create and manipulate complex drawings through the use of symbols and shapes. These elements are categorized into layers and allow the user to customize the layers to the specific requirements of the drawing. The earliest models of AutoCAD were a two-dimensional (2D) drafting application that used 2D line drawing and spline types. The 3D products available in AutoCAD 2009 have added 3D objects, which contain a 3D drawing. User interface The user interface for AutoCAD includes three main parts: The drawing window – the main user interface screen where the user interacts with the AutoCAD application. [Break on this error] document.getElementById('MainContent_container').innerHTML += ''; Does anyone know why this might happen and how I can resolve it? A: IE 8 does not support the XMLHttpRequest object, so you must use the ActiveXObject() object. There is a tutorial here, but it does assume you know what you're doing.
