### **JupSat95**

JupSat95 is an easy-to-use utility that will calculate and display the positions of Jupiter's four main moons. JupSat95 will work with any values that you input into JupSat95 and, of course, with the values of the JPL database. JupSat95 will allow you to change your units and generate new JPG images, with a single click, of Jupiter with the moons included. After you have executed JupSat95 you will receive an e-mail message telling you which moons are included and displaying JupSat95's configuration settings. The application is coded in Java and is able to display a monochrome image. The positions for each moon in JupSat95 are calculated using ephemerides generated by JPL's Ephemeris Server. For a description of how these values are calculated, please refer to the JPL Ephemeris Server Ephemeris Help. How to use: \* To start the application, click "Open". \* If you are calculating your own values, click "Change" and start entering the desired values. \* If you are using the JPL data, click "Start". \* Click "Open" when you are

---

finished. \* Next, click "Calculate", then scroll through the moons to find the one you want included in your image. \* To view your output, click "Select Jupiter" and click "Create". \* Next, scroll to the bottom of the window and choose how many moons you want to include. \* Click "Create" and click "OK". \* Next, change the "Size" to "Medium". \* Select the unit you would like to use for distances. \* Click on the image you just created. \* To save the image, click "Save", then select "Save as" and type a name for the image. \* Before you execute the application, you should change your monitor's resolution to match

## JupSat95 With Product Key Free Download

This software was developed by M. Rusell, School of Physics and Astronomy, Comahue University, Argentina. References Category:Astronomical tools Category:Astronomical observatories Category:Physics software

Roy Williams (rugby league) Roy "Roy" Williams (birth registered first ¼ 1943 – 22 February 2018) was an English professional rugby league footballer who played in the 1950s and 1960s. He played at representative level for Great Britain and England, and at club level for the Featherstone Rovers (Heritage № 420), as a goal-kicking or, i.e. number 3 or 4.

Background Roy Williams' birth was registered in Pontefract district, West Riding of Yorkshire, England, and he died aged 80.

Playing career International honours Roy Williams won caps for England while at the Featherstone Rovers in 1965 against Wales (2 matches). County honours Roy Williams won cap(s) for Yorkshire while at the Featherstone Rovers in 1967 against Lancashire, in 1969 against Lancashire, and won caps for Great Britain while at the Featherstone Rovers in 1969 against Australia, and New Zealand.

Challenge Cup Final appearances Roy Williams

---

played in Featherstone Rovers' 6-3 victory over Leeds in the 1965 Challenge Cup Final during the 1964–65 season at Wembley Stadium, London on Saturday 7 May 1965, in front of a crowd of 89,016. ### What's New in the JupSat95?

Display positions of Jupiter's four main moons. JupSat95 is not a functional model of the four main Moons of Jupiter. This code can be used to calculate and display the nominal positions of the four main moons of Jupiter. For easy use, the

---

program is interfaced with the command line interface of Linux. Other programs may be found at: JupSat95 Linux version: \$ gzip -f JupSat95-v1.19.tar.gz \$ tar -xvzf JupSat95-v1.19.tar.gz \$ cd JupSat95-v1.19 \$ ./JupSat95 -----

This program is free. You are free to use and modify it, but you may not publicly distribute it. Copyright (C) 1998 Thomas L. Jupke

----- \*\*\*\*\*  
\*\*\*\*\*  
\*\*\*\*\* . . Description: . . JupSat95 - utility for calculation and display of a set of Jupiter's four . Main moons positions. . . Allows for calculation of basic sidereal (J2000.0) coordinates of the four . main moons using a set of masses and orbital radii. . . Allows for calculation of J2000.0 (J2010.0) moon positions using the . DSS/J2000.0 equatorial coordinate system (ECS). . . Provides for high precision calculation and display of moon's positions using . ecliptic orbital radii and masses. . . Allows for calculation and display of moon's positions using the . World Geodetic System (WGS) / J2000.0 or J2001.0 ecliptic coordinate system. . . The WGS / J2000.0 is fixed for Earth and Moon orbit with one exception: the . altitude of Moon's perigee. Using

---

the orbital radii and masses . calculated for the current epoch the program returns the moon's WGS coordinates. . . . Installation: . . JupSat95 is available from the previous link. .
