What's New in the AutoCAD?

Fast parallel import from popular file formats such as .PDF, .DWG, and .DWF. Import to any drawing layer with an action. The same action can export comments back to your drawing. (video: 2:05 min.) Drawings created with CAD software can have comments. Convert comments from a previous version of AutoCAD and import them to your current drawing to make your drawings cleaner, more organized, and more accessible. (video: 2:48 min.) See the changes to your drawing right away in familiar 2D views. View your drawing with the new live feedback to see where the import and export actions were performed. Operate easily with text and annotation tools on files. Import image-based comments that are stored as text or notes, import PDFs, or save your comments in a format that's compatible with other software. With Interact, you can specify how a user can interact with a drawing. Easily create a freehand drawing tool that can be invoked through a menu, ribbon button, or shortcut key. With the Markup Assist command, you can create and use annotations with greater flexibility. It gives you a collaborative workspace with minimal user input. With no file-save step and no access to any properties that might be present in a file, you can create and modify comments using a familiar "freehand" style of drawing. As part of the Autodesk Design Lifecycle, Autodesk Inventor now creates linkable CAD files that are fully compatible with AutoCAD. (Inventor 2018 is required for this capability.) Create and store your drawings in one file, check to make sure they're compatible with other software, and then access them from any application without the risk of CAD files that don't work outside of AutoCAD. With the 2023 release, Inventor now gives you access to the latest versions of AutoCAD and has the ability to link to shared files. Make any annotation quick and easy with a keyboard shortcut. Just press CMD+ALT+M to quickly create and edit any text or annotation. A keyboard shortcut is always your best way to increase your productivity. With a command you can find any annotation or mark in a drawing and copy it to the clipboard. With the AutoCAD Browser, the Find command helps you look for a specific annotation
