The 13th edition of the AutoCAD User Group (ACUG) conference is coming up in early September, and it's shaping up to be another exciting event. At ACUG13, Autodesk executives, users, and developers will share their stories on what's new and what's hot in the AutoCAD world. In this blog, we'll highlight a few of the highlights of ACUG13 and look at what we can expect from Autodesk in the future. The ACUG 13 Keynote Speakers The ACUG13 keynote speakers will discuss topics including: AutoCAD 2020: What's New and Why It Matters AutoCAD's big AutoCAD 2020 update has lots of new features. Learn about what it's going to mean for your work. Stefan Becker, senior vice president and general manager, AutoCAD and Office software, Autodesk Brian Schaub, senior vice president, Architecture and Design, Autodesk Colleen Keihn, vice president of customer success, AutoCAD and Office software, Autodesk The AutoCAD 2020 Update When it comes to major releases of AutoCAD, the releases are based on two key points: software and features. Software represents the underlying architecture of AutoCAD and the underlying libraries upon which the software runs. Software releases come every 18 months. AutoCAD 2020 is no different, but there are a few major additions in this update: Enhanced drawing experience: The new features in AutoCAD 2020 provide a new, more intuitive approach to creating and editing drawings. These improvements include new features for the modeling tools, including smarter extraction, support for model-based layouts, and the ability to select model components directly with the select tool. The enhancements to drawing features include improved rendering, animation, and rendering quality. Enhanced interactivity: With features such as the RMB (right mouse button) and the mouse wheel, you're able to more intuitively interact with your drawings. The update includes improved support for GIS and measurement tools, including workflows for terrain and

2D/3D AutoCAD (and AutoCAD LT) is used for 2D design, surveying, and mapping. AutoCAD is not limited to 2D only, and can be used as a 3D modeling tool with the inclusion of many tools. For 3D modeling, it was originally only usable with version 15 for a short period of time. AutoCAD Architecture uses a 3D interface to model 2D drawings, the most notable being Architooll-AutoCAD. Desktop and mobile apps are available, as well as 3D on the Web and a 3D version of AutoCAD called

AutoCAD 360. 3D feature support AutoCAD has 2D drafting and 3D modeling tools, and as such supports drafting and modeling of 2D and 3D drawings. Design, modeling, and drawing A command named 'Draw' was introduced in AutoCAD 2000 to allow drafting and editing of 2D drawings. The 'Draw' command and other commands used to create 2D drawings now generally perform the same task as the '3D Model' command. With AutoCAD 2012, the 'Draw' command no longer allows the user to create 2D drawings. Users must now select the 2D Design option from the 2D/3D Modeling tab to create 2D drawings. The 'Draw' command is now generally used for creating and editing 2D drawings. As such, the 'Draw' command is available in all AutoCAD release except 16. The '3D Model' command is now generally used to create 3D models. The AutoCAD 2000 'Draw' command only allowed for the editing of 2D drawings. With AutoCAD 2017, the 'Draw' command supports the creation of 2D drawings and is available in all releases. The '3D Model' command is now available only in AutoCAD 2010 or higher, and is only used to create 3D models. Workflows and tools AutoCAD workflows By default, a user can only design a 2D drawing. A typical workflow might be to design a 2D drawing, place a bill of material, create a database, run an assembly, and then a series of 2D drawing revisions to refine the design. AutoCAD has three workflows: Drafting (formerly 3D Modeling) Drafting in AutoCAD is a similar process to af5dca3d97

Start the Autocad application and open the menu File -> Options Then, open the Tab Autocad Options Now open the Tab Views and scroll down to see your product activation code. You will see "Activation code. Enter this code in your Autocad License Server to make your Autocad activated." ### STORIES ABOUT GARDENERS AND THEIR WORK

Gardener's Delight A GARDENERS DREAM IS A GARDEN OF THE MIND. What does it take to build a garden? For starters, a load of enthusiasm, passion, love and pride of ownership. As we designed and built our garden at the LaRocca residence in the historic Rose Garden neighborhood of Stamford, Connecticut, our garden had to accommodate not only our family's needs, but also our dogs, the sprinklers, and other garden equipment. "Proud of the Garden" Our effort to be a gardener's delight has been evident in the design of the garden and its many play spaces. Yet, for us, the vision was also about more than a well-designed garden; it was about transforming a once neglected, overgrown area of our yard into a family gathering place and play area. Our efforts to build a garden of the mind began with our shared love of gardens and plants. We have learned that a garden of the mind has a mental as well as a physical dimension. The root system and plantings must be carefully thought out and considered to be a garden that makes sense. Like the work that we do in the nursery and the garden, our design and construction work are also

ever, even on huge objects. Find the smallest, quickest tool to model any object. Now, even powerful 3D objects, such as tables, chairs, and people, are as easy to model as 2D objects, such as walls and columns. Make small details easy. In the Modeling window, draw smoothly with real-time elasticity. See how 2D tools work with 3D objects. Drag and reorder geometry with the Object Snap. Select multiple faces or edges to model easily. Save your time with Advanced 3D modeling. Using the RealTime 3D Modeling and AutoTrace tools you can easily draw from geometric shapes and meshes. You can also see the result of your edits instantly, without having to redraw. (video: 1:15 min.) RealTime 3D Modeling: Immerse yourself in your work by creating your own 3D content. Real-time 3D editing is easy to use and it is customizable to meet your needs. All design work is easy. Designers no longer have to switch between layers to create 3D models. And, with real-time editing, you can model even huge objects. Simply select a single object, and new, editable geometry instantly appears. Easily create your own 3D content. Draw and model 3D shapes, meshes and models with your mouse. Make textured surfaces that resemble your real-life surroundings. Use 3D measurements to accurately model and place 3D objects. Enhance your productivity with new real-time editing tools: Select two or more faces to easily delete and redefine their shape, size, color, and linetype. Drag and drop faces to reorder them.
